## **GOV'T OPERATION OUT OF POLITICS**

Party Leaders Convinced by Results of National Canvass of Editors.

VINDICATES FORMER POLL

Overwhelming Veto Like That of Year Before From Both Sides of Pelitical Fence.

Washington.-Inner circles of both littleal parties here are greatly inested in the results of a national poll on the question of government poll on the question of government speration among over 5,000 newspaper editors throughout the country. With 86 per cent of these editors, regardless of political faith, giving it as their impartial epinion that the public is more than ever opposed to the government going into business in competition with its citisens, observers here see little chance that either political party will find it a profitable exampler issue.

campaign issue. In the epinion of party leaders this sort of a canvass among newspaper editors is the best possible index of public opinios. They recall a similar questionnaire sent out a year age in connection with the proposition that roads permanently. Replies at that time from approximately the same number of editors showed 88 per cent against the principle of government operation. They recall also that within ten days from publication of the result of the former questionnaire the sentiment for return of the railreads to their owners had definitely erys-

Comparison of present results in de-tail with those of a year age con-vinces the political student not only that these editors have been accurate in their judgment, but that parts in their judgment, but that party considerations played no part in forming it. From Democratic and supposedly radical Texas, for example, Mr. as the present questionnaire brought replies from editors of 244 papers, only three of which are Republican. Yet the percentage against government ejeration was 92, which is exactly the same as that given by 200 editors from Republican Michigan, among whom were representatives of only Democratic papers. Other states that pair percentages signifiwith 100; Connecticut and South Carelina, with 97; Maine and West Virginia, with 96; Kentucky and New York, with 91; Missouri and Pennsylvania, with 89; Ohio and Oklahoma,

The result of the present poll as to Thursday. government operation in each state are graphically shown by the follow-

# Consistency and its Result

More than twelve years ago Willard built his first automobile starting, lighting and ignition battery-several years before electric starting came into general use.

For more than twelve years the one object on which Willard effort has concentrated has been automobile batteries -batteries that would serve the car owner longer, more efficiently and more reliably.

This consistency, this concentration on one big problem, has resulted in Willard leadership in the automotive battery field, and is responsible for-among many and varied contributions to the industry-the perfection of Threaded Rubber Insulation, the greatest battery improvement in years.

There are today 152 passenger car and truck manufacturers using the Still Better Willard Battery-the only battery with Threaded Rubber Insulation.

Alma Electric & Battery Co.

ing of a better automotive battery, has resulted in the adoption of the Still Better
